## **QA Automation Engineer**

EfficientIP is a fast growing DDI (DNS DHCP IPAM) vendor that provides solutions to address large companies' needs to drive business efficiency through network services availability, security and performance. To sustain our growth, the QA department is looking for a software automation engineer.

As a QA automation engineer, you will innovate, suggest and implement technical solutions to ensure the correct integration of new features and existing functionalities.

### **Why join us?**

You are passionate about technology and comfortable with an international and agile environment. You're ready for the challenge of building a high tech network solution that serves famous customers like Ikea, Pfizer, Netflix, Boeing, HSBC, Renault-Nissan, Vodafone or Telefonica.

You want to work with the latest virtualization network and system technologies like containers, SDN, network automation, cloud, high performance protocols. You will join a dynamic and agile team in a quickly changing environment.

You will be involved in an international organization that empowers its employees and works hard to allow each person reach their full potential.

You are familiar with Javascript, a test automation framework and have a first experience in quality assurance, this job is made for you!

### **Responsibilities**

- Work with development teams to design and develop automated test scripts
- Create structured test plans to handle recurrent issues
- Maintain the existing regression automated tests scripts
- Expand continuously the current test coverage
- Evangelize our dev teams to best practices defined by the QA and help them to go forward with automatic functional test framework (Nightwatch, Jenkins, ...)
- Schedule the tests execution following the development cycle
- Provide feedback about automated test results of the current build development
- Track possible regressions and set up mitigation solutions with the teams involved
- Ensure an active technological watch to be proactive in adopting new tools and / or new technologies to ensure scalability of the QA services

### **Requirements**

- Proven experience as a QA automation engineer, front-end developer or similar role
- Knowledge of multiple front-end languages and libraries (e.g. HTML/ CSS, JavaScript,

- XML, jQuery)
- Knowledge of dev tools/firebug (DOM inspection, CSS selector)
  - Knowledge of Node.js ecosystem
  - Degree in Computer Science or relevant field
  - Excellent communication and teamwork skills
  - Tech oriented, autonomous and resourceful profile

### **Pluses**

- Experience with Nightwatch.js test automation framework
- Knowledge of Terminal, Shell
- Interest in Continuous Integration, DevOps
- Organizational skills, attention to details & analytical mind

The job is based in our office in La Garenne-Colombes, France, at the junction of train line L and tram T2.
